

LECTURE 3:

PORTFOLIO MANAGEMENT

This lecture focused on portfolio management and how a portfolio can be used to show my learning, skills, achievements, and evidence.

I understood that a portfolio is not only a collection of documents. It is a professional way to present my progress, reflections, projects, and abilities.

As a Software Engineering student, a digital portfolio is useful because I can show my CV, projects, certificates, lecture reflections, and practical work in one organised place.

HOW I CAN PRACTICALLY APPLY IT

I practically applied this lesson by creating a digital e-portfolio app for my Professional Skills module.

Instead of only preparing a normal document portfolio, I created an app because I am a Software Engineering student. This helps me present my work in a more creative and organised way.

In this app, I added my lecture reflections, evidence documents, Food Festival project photos, CV, cover letter, and mock interview preparation.

MY SELF-REFLECTION

Before this lecture, I thought a portfolio was only a file with documents.

After this lecture, I understood that a portfolio should show my learning journey, skills, evidence, reflection, and personal development.

This lecture helped me understand the importance of organising my work properly. It also motivated me to create a digital portfolio app to present my Professional Skills module work clearly.
