

LECTURE 9:

NEGOTIATION SKILLS

This lecture focused on negotiation skills and how to communicate with others to reach a fair agreement.

I learned that negotiation is not about arguing or forcing others to accept my idea. It is about listening, understanding both sides, discussing clearly, and finding a solution that is acceptable for everyone.

As a Software Engineering student, negotiation skills are useful in group projects, meetings, presentations, interviews, workplace discussions, and problem-solving situations.

MY SELF-REFLECTION

Before this lecture, I thought negotiation means winning an argument or proving my point.

After this lecture, I understood that negotiation means discussing respectfully and finding a fair solution for both sides.

This lesson helped me understand that listening is very important.

When I listen carefully, I can understand the other person's opinion and explain my ideas better.

As a Software Engineering student, I can use negotiation skills in group projects, presentations, meetings, and future workplace situations.

MY SELF-REFLECTION

- 
- It helps me communicate clearly
 - It helps me respect others' opinions
 - It helps me solve problems calmly
 - It helps me avoid unnecessary conflicts
 - It helps me work better in a team
